                                                                                                                         Zace2 gene in a biological sample, as probes for in vivo diagnosis and for detecting and localizing Zace2 gene expression in tissue samples, to determine whether a subject's chromosomes contain a mutation in the Zace2 gene, and to detect aberrations associated with the Zace2 locus. Inhibitors of ACE are used for treating hypertension of various conditions, including left ventricular systolic dysfunction, progressive renal impairment, scleroderma renal crisis, congestive heart failure due to dysfunction, and treatment of atherosclerosis. Zace2 agonists may be used to treat infertility while Zace2 antagonists are used for inducing infertility. The present sequence represents a cDNA encoding the human zaces protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to the metalloenzyme Zace2. Zace2, an angiotensin-converting enzyme is a zinc metallopeptidase that plays roles in blood pressure regulation and fertility. Zace2 can be expressed by standard recombinant methodology. Zace2 polypeptides are useful for treating an inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis), diseases associated with inflammation like arthritis and entercolitis, as targets for identifying modulators of zinc protease activity, for screening or identifying new angiotensin-converting enzyme (ACE) inhibitors, and as a basis for rational drug design for inhibitory molecules. The nucleic acids can be used to detect the expression of a converting enzyme in the converting enzyme in the expression of a converting enzyme in the converting enzyme in the expression of a converting enzyme in the converting enzyme in the expression of a converting enzyme in the converting enzyme in t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Angiotensin-converting enzyme, Zace2, useful for treating inflammatory bowel disease, e.g. Crohn's disease and ulcerative colitis, or diseases associated with inflammation such as arthritis and enterocolitis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   13-MAY-1999;

                                                                                                                                                                                                                                    The present sequence encodes a human angiotensin converting enzyme-2 (ACE-2). ACE-2 is expressed predominantly in kidneys and testis. The sequence of the full length ACE-2 cDNA was determined from a clone obtained from a cDNA library prepared from mRNA of a human heart of a subject who had congestive heart failure. ACE-2 has significant sequence homologies with ACE enzymes, and has also been shown to hydrolyse angiotensin I into Ang.(1-9). The ACE-2 therapeutics are used to treat blood pressure related diseases and conditions, such as hypertension, congestive heart failure, chronic heart failure, acute

cDNA. ACE is also referred as peptidyl dipeptidase A. Nucleic acid sequence encoding ACE-2 is useful as antisense or antigene agents for sequence specific modulation of gene expression or in the analysis of single base-pair mutations in the gene. Nucleic acid sequence encoding ACE-2 is useful in therapeutics, diagnostics and in screening assays. ACE-2 antagonist is used to treat hypertension or congestive heart failure (CHF). ACE agonist is used to reduce the inflammation and pain resulting from an insect sting or bite, which was accompanied by an injection of bradykinin. Anti-ACE-2 antibodies are used to monitor ACE-2 protein levels for determining the disease or condition associated with an aberrant protein level.

The present invention describes a new method of treating a body weight compound. The invention can be used for treating body fat by compound. The invention can be used for treating body weight disorders, compound. The invention can be used for treating body weight disorders, particularly obesity of at least grade 1, diabetes, atherosclerosis and a state associated with lipid metabolism. The method is used for treating compound weight loss, rapid weight gain, anorexia, cachexia, bulimia, congestive heart failure, chronic heart failure, left ventricular typercholesterolaemia, hyperlipidaemia, an aberrant metabolic rate, congestive heart failure, chronic heart failure, left ventricular typercholesterophy, acute heart failure, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease and Huntington's disease), myocardial infarction, cardiomyopathy, systemic inflammation response syndrome, sepsis, polytrauma, inflammatory bowel disease, acute and composed composed composed injury, carebral vasospasm after subarachonid are tracker, reperfusion composed including asthma, adult respiratory distress syndrome, wound healing and scar formation. The invention decreases the appetite, condex of greater than 23 (preferably 24.9)kg/m^2. The present nucleic acid sequence encodes the human ACE-2 protein of the invention.

The invention relates to human angiotensin converting enzyme-2 (ACE-2) polypeptides and polynucleotides. ACE-2 is also known as peptidyl dipeptidase A (EE 3.4.15.1). Polypeptides of the invention are useful for treating or preventing the development of abnormal blood pressure and diseases or disorders associated with the protein in a subject. The diseases include hypertension, hypotension, congestive heart failure, chronic heart failure, acute heart failure, myocardial infarction, a therosolerosis, arrhythmia and renal failure. They are also useful for treating inflammatory conditions and diseases relating to fertility. The present sequence is human full-length ACE-2 cDNA. The ACE-2 gene is located on the x chromosome at p21-22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated human polypeptide, known as angiotensin converting enzyme-2, useful for treating or preventing the development of an abnormal bloc pressure or related diseases, e.g. hypertension, heart failure or

                                                                                                                    gene expression in pericyte cells, the release of proteoglycans from cartilage, the proliferation of inner ear utricular supporting cells or of T-lymphocytes, the release of a cytokine from peripheral blood monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polynucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                   PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor alpha (TNF alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumours e.g. lung, breast, prostate, cervical -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel human proteins (NHP) and the nucleic acids that encode them and antibodies raised against them. The proteins, antibodies and nucleic acids are useful in the diagnosis, prognosis, prevention and/or treatment or diseases and/or disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New human proteins, useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cardiovascular disorders, autoimmune disorders and reproductive disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2911 BP; 896 A; 570 C; 655 G; 788 T; 2 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                         converting enzyme is a zinc metallopeptidase that plays roles in blood C pressure regulation and fertility. Zace2 can be expressed by standard CC recombinant methodology. Zace2 polypeptides are useful for treating an CC inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis). CC diseases associated with inflammation like arthritis and enterocolitis. CC as targets for identifying modulators of zinc protease activity, for CC screening or identifying new angiotensin-converting enzyme (ACE) CC inhibitors, and as a basis for rational drug design for inhibitory CC molecules. The nucleic acids can be used to detect the expression of a Cace2 gene in a biological sample, as probes for in vivo diagnosis and CC for detecting and localizing Zace2 gene expression in tissue samples, CC to determine whether a subject's chromosomes contain a mutation in the Cace2 gene, and to detect aberrations associated with the Zace2 locus. CC conditions, including left ventricular systolic dysfunction, progressive crenal impairment, scleroderma renal crisis, congestive heart failure due to dysfunction, and treatment of atherosclerosis. Zace2 agonists may be used to treat infertility while Zace2 antagonists are used for inducing cancer. Such constain a conditions associated with the cace2 and the mouse cancer to the conditions and treatment of atherosclerosis. Zace2 agonists may be considered to treat infertility while Zace2 antagonists are used for inducing confertility. The present sequence represents a cDNA encoding the mouse cace?
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Angiotensin-converting enzyme, Zace2, useful for treating inflammatory bowel disease, e.g. Crohn's disease and ulcerative colitis, or diseases associated with inflammation such as arthritis and enterocolitis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the metalloenzyme Zace2. Zace2, an angiotensin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 10; Page 104-109; 125pp; English.

Angiotensin-converting enzyme, Zace2, useful for treating inflammatory bowel disease, e.g. Crohn's disease and ulcerative colitis, or diseases associated with inflammation such as arthritis and enterocolitis -

Disclosure; Page 113-118; 125pp; English.

as targets for identifying modulators of zinc protease activity, for screening or identifying new angiotensin-converting enzyme (ACE) inhibitors, and as a basis for rational drug design for inhibitory molecules. The nucleic acids can be used to detect the expression of a Zace2 gene in a biological sample, as probes for in vivo diagnosis and for detecting and localizing Zace2 gene expression in tissue samples, to determine whether a subject's chromosomes contain a mutation in the Zace2 gene, and to detect aberrations associated with the Zace2 locus. Inhibitors of ACE are used for treating hypertension of various conditions, including left ventricular systolic dysfunction, progressiv renal impairment, scleroderma renal crisis, congestive heart failure du to dysfunction, and treatment of atherosclerosis. Zace2 agonists may be used to treat infertility while Zace2 antagonists are used for inducing converting enzyme is a zinc metallopeptidase that plays roles in blood pressure regulation and fertility. Zace2 can be expressed by standard recombinant methodology. Zace2 polypeptides are useful for treating an inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis), diseases associated with inflammation like arthritis and enterocolitis, infertility. The present sequence represents a cDNA encoding invention relates to the metalloenzyme Zace2. protein Zace2, an angiotensin the progressive mouse

molecules. The nucleic acids can be used to detect the expression of a Zace2 gene in a biological sample, as probes for in vivo diagnosis and for detecting and localizing Zace2 gene expression in tissue samples, to determine whether a subject's chromosomes contain a mutation in the Zace2 gene, and to detect aberrations associated with the Zace2 locus. Inhibitors of ACE are used for treating hypertension of various conditions, including left ventricular systolic dysfunction, progressive renal impairment, scleroderma renal crisis, congestive heart failure due to dysfunction, and treatment of atheroscle-crosis. Zace2 agonists may be used to treat infertility while Zace2 antagonists are used for inducing infertility. The present seminora "arrenant".
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pressure regulation and fertility. Zace2 can be expressed by standard recombinant methodology. Zace2 polypeptides are useful for treating an inflammatory bowel disease (e.g. Crohn's disease and ulcerative colitis), diseases associated with inflammation like arthritis and enterocolitis, as targets for identifying modulators of zinc protease activity, for
                                                                                                                                                                                                                                                                                                                                                                                                                      screening or identifying new angiotensin converting enzyme (ACE) inhibitors, and as a basis for rational drug design for inhibitory molecules. The nucleic acids can be used to detect the expression of
                                                               infertility. The page encoding the human
                                                               The present sequence represents a degenerate sequence human zace2 protein.
